

Cross-Application

Image RAG Assistant ●

n8n

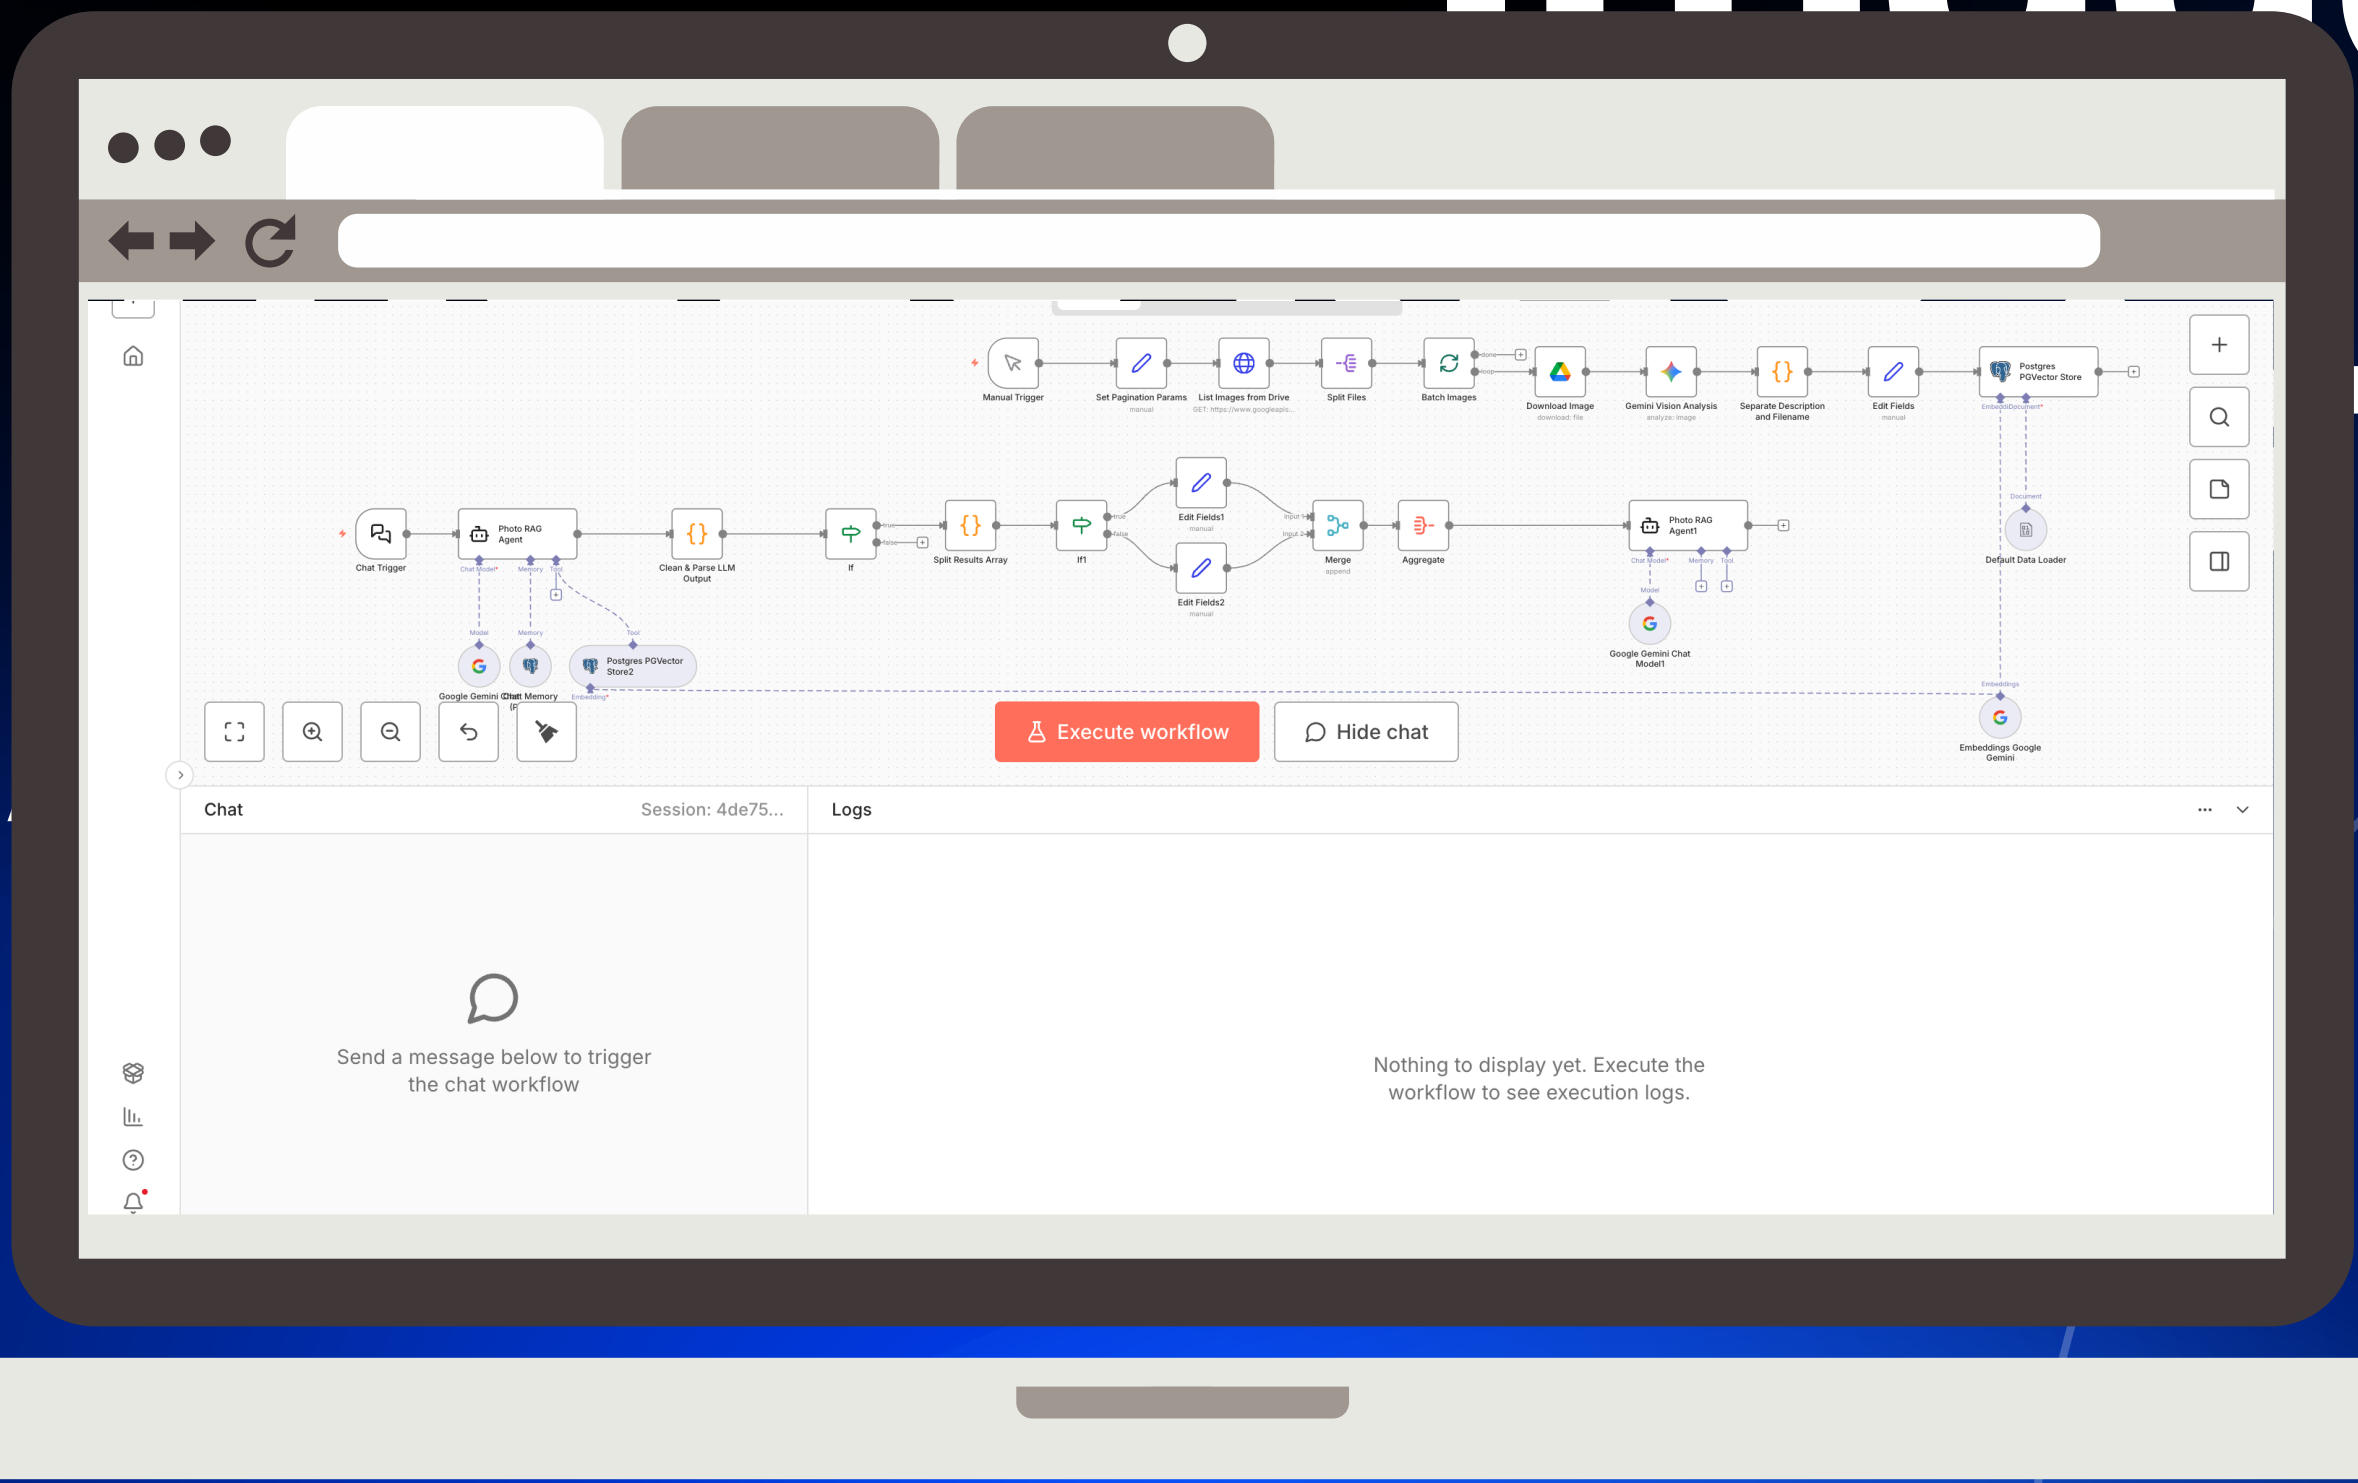

Google Drive

Gemini

Image RAG Assistant

Image RAG

Assistant

n8n

Google Drive

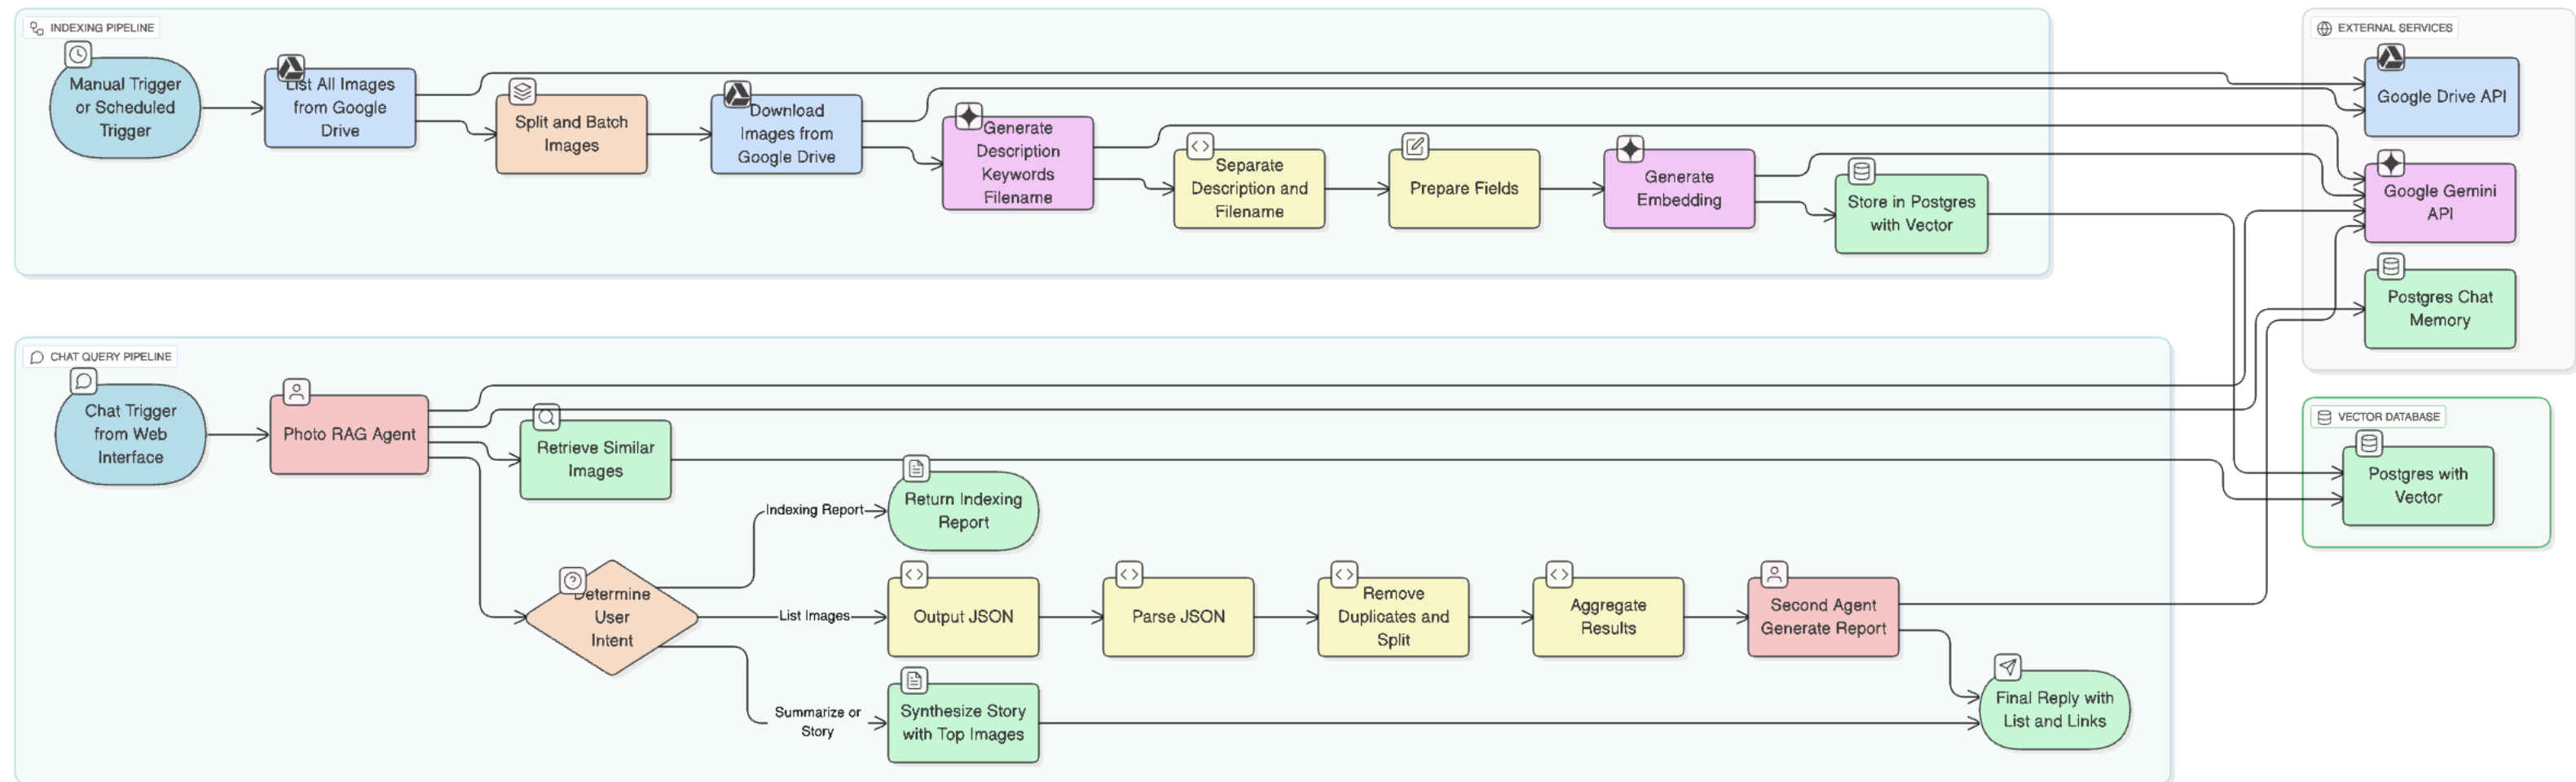

Gemini

Why we need an image-retrieval assistant

Goal: “Retrieve and analyze personal images via chat”

Problem & Goal

System Overview

Tech Stack

PostgreSQL & pgvector

Stores vectors for quick retrieval

Google Drive

Storage for all user
images

n8n

Automates workflows
for efficiency

Gemini

(2.5 Flash)

Generates image
embeddings effectively

Docker

Docker deployment

Project Structure

image-rag-assistant/

—— docker-compose.yml	<i># Configuration to launch Google Drive, n8n, Gemini, and DB services.</i>
—— .env.example	<i># Template for API keys and credentials (NOT INCLUDE REAL KEYS).</i>
—— README.md	<i># Project documentation.</i>
—— architecturediagram.pdf	<i># System architecture diagram (REQUIRED for submission).</i>
—— .gitignore	<i># Specifies files to be ignored by Git (e.g., .env file).</i>
—— n8n-workflows/	
—— Google Drive Image RAG Indexer + Chat (13)_Final.json	<i># The core RAG workflow.</i>

How It Works

Google Drive

Indexing images
from Google Drive

n8n

Automates workflows
for efficiency

Gemini

Embedding via Gemini

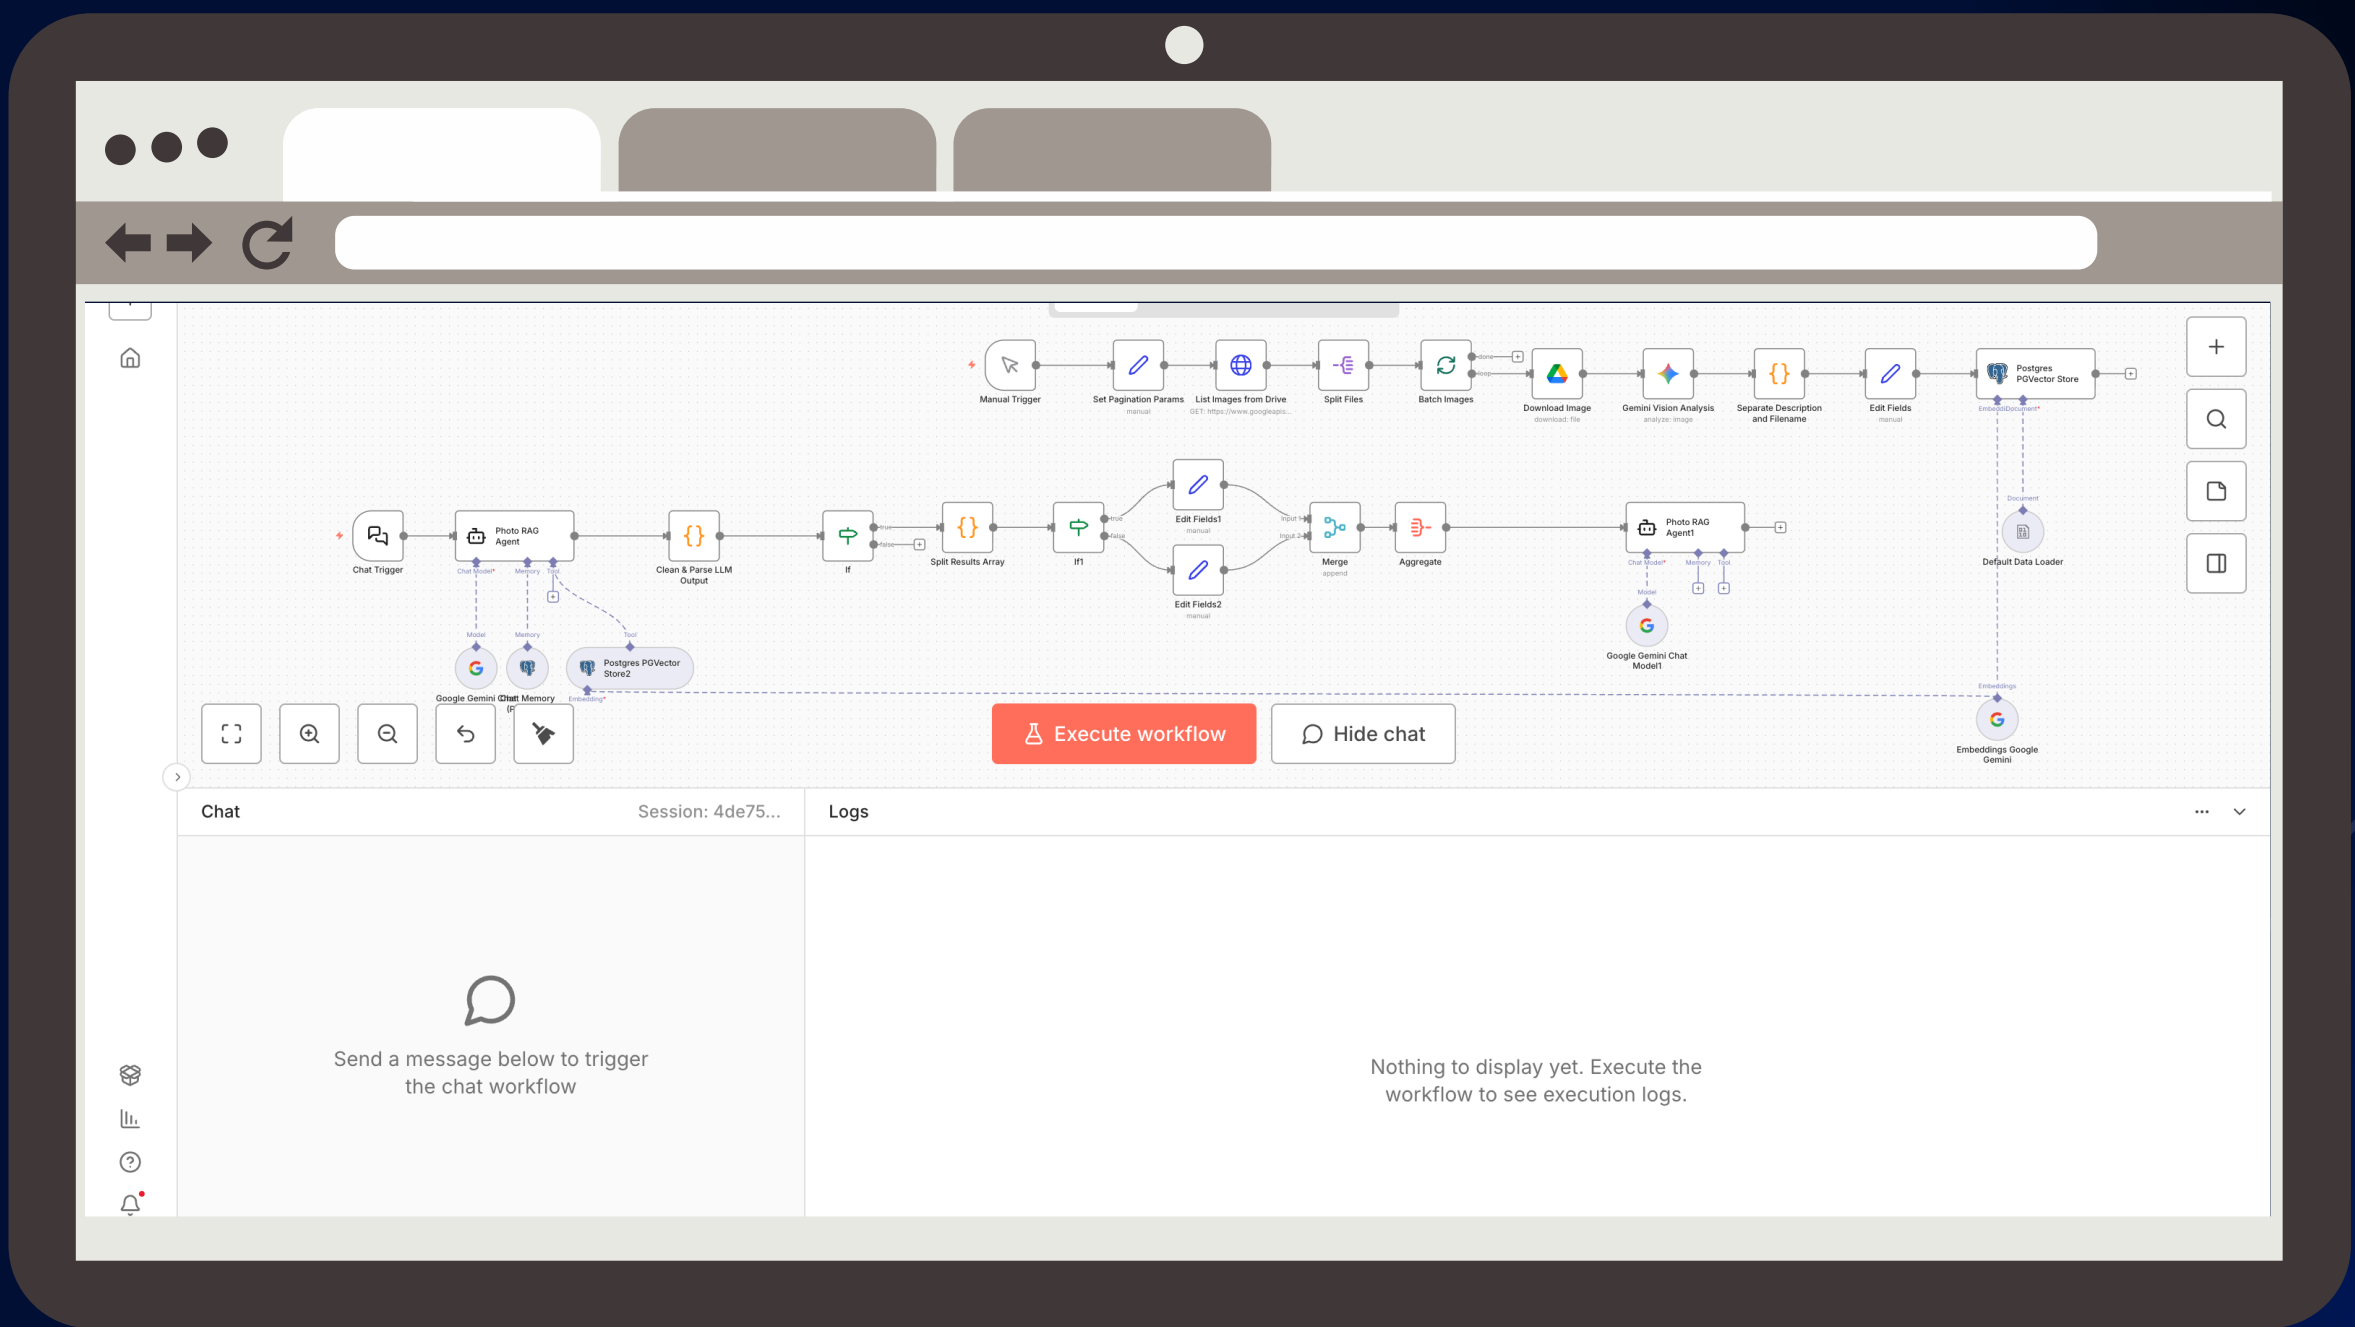

pgvector

Storing embeddings
in pgvector

Chat UI

Chat search interface

**Initialize environment
& run Docker**

Setup .env

Run Docker

Import n8n workflow

Summary

Streamlined Image Retrieval Process

- Revolutionizing how we access personal images
- Enhance efficiency and organization in image management

STREAMLINED IMAGE RETRIEVAL PROCESS

Closing

Thank You.
